2023/2024

Amilcar Petroleum Operations

Institut Supérieur d'Informatique et de Multimédia de Gabes

internship report

15-06-24/14-07-24

Author:

Eya Trichili

Supervisor:

M. Zied Maazoun

Acknowledgments

I would like to express my deep gratitude and sincere thanks to everyone who contributed to the success of my internship at Amilcar Petroleum Operations (APO). Their invaluable support, expertise, and encouragement greatly enriched my professional experience.

First and foremost, I warmly thank my internship supervisor, Mr. Zied Maazoun, for his guidance and valuable advice throughout my internship. His patience, professionalism, and availability were of great assistance in accomplishing my tasks and in my personal development.

My thanks also go to the entire IT team for their warm welcome, collaboration, and knowledge sharing. Every team member contributed to my training by allowing me to actively participate in projects and meetings. Their team spirit and kindness created a stimulating and friendly working environment.

I wish to express my appreciation to all my work colleagues for their support and valuable advice. Their shared experiences, encouragement, and willingness to help greatly facilitated my integration and progression within the company.

I would like to thank the entire APO staff for their kindness and cooperation. Their warm welcome and open-mindedness helped make my internship enjoyable and enriching.

Finally, I want to thank my family and friends for their unwavering support throughout my academic and professional journey. Their constant encouragement and moral support were crucial in completing this internship.

chapter 1: General Introduction

In this chapter, we present the general framework. We begin with an overview of the company APO (Amilcar Petroleum Operations), where I carried out the project.

1.Introduction

1.1. Presentation of APO

Amilcar Petroleum Operations (APO) is a joint-stock company co-owned by Shell Tunisia Upstream Limited and the Tunisian Petroleum Activities Company (ETAP). It was founded in 2015. Its headquarters is located in Tunisia, in the Berges du Lac area of Tunis. APO manages the operation and production of the "Hasdrubal" gas field, its offshore platform, and the onshore hydrocarbon processing plants. The company employs 320 staff members, who are seconded from the two co-owning companies. APO's personnel cover several disciplines such as Process, Mechanical, Instrumentation, Electrical, and Health, Safety, Security, and Environment (HSSE). APO manages its projects in accordance with an integrated management system. Indeed, the company holds several international certifications, including ISO14001.

1.2.Safety procedures

1.2.1Personnel Badges

All those entering the plant, visitors included, are given a Badge allowing them access to the plant, visitor access is of-ten very limited, the badges are processed by terminals upon entry to any specific location on the plants (Office building,muster point, Hannibal plant, Hasdrubal plant, General Area). The badges are an efficient way of knowing the location of all personnel at any given, this is of course useful for Human re- source management, but it is even more important in case of emergencies as it allows the localization of personnel during anincident.

1.2.2 Personal protection equipment (P.P.E.)

All workers and all those visiting the work site are granted their own P.P.E. after their induction for the Hannibal/Hasdrubal site. Anyone present on-site must be wearing the entirety of his P.P.E. or shall be subject to reprimand in the event of entry without said equipment and denied entry if attempting to enter without it.

The P.P.E. includes:

- **A protective work suits.**
- **Heavy protective work boots.**
- **A personal H2S gas detector.**
- **An escape set consisting in a portable gas mask.**
- **Earplugs.**
- **A Helmet.**
- **Goggles.**

2.Presentation of the Topic

Static websites are designed primarily to present basic information about a company. They serve the purpose of highlighting essential details about the company, such as its history, products or services, values, mission, and contact information. They provide a clear and concise overview of the company's activities.

2.1requested work

The work to be done is within the context of providing simple and intuitive navigation, allowing visitors to easily find the information they are looking for. This solution involves developing a website that primarily aims to:

- **Present the company.**
- **Display the company's news.**
- **Show available job opportunities.**

chapter 2 :implementation

1. Introduction:

In this chapter, our goal is to define the working environment by specifying the hardware used for the project. Additionally, we will present some interfaces that have been created to illustrate the operation of certain system activities.

2. Working Environment:

2.1. Hardware Environment:

The application was coded on a Acer laptop.

2.2. Technologies Used:

HTML, stands for "HyperText Markup Language," which can be translated as "markup language for hypertext." It is used to create and represent the content and structure of a web page.

CSS, or Cascading Style Sheets, are used to style web documents, such as HTML or XML pages. Through appearance properties (colors, borders, fonts, etc.) and layout properties (width, height, side-by-side, top-to-bottom, etc.), the presentation of a web page can be completely modified without any additional code in the web page itself.

JavaScript is a scripting programming language primarily used in interactive web pages and is an essential part of web applications. Along with HTML and CSS, JavaScript is at the core of the languages used by web developers.

Bootstrap is a collection of tools useful for designing websites and web applications. It is a framework that includes HTML and CSS code, forms, buttons, navigation tools, and other interactive elements, as well as optional JavaScript extensions.

2.3 Working Environment:

Sublime Text is a sophisticated text editor for code, markup, and prose. Known for its sleek interface and powerful features, it offers features like syntax highlighting, multiple selections, and split editing, which make coding more efficient. Its extensibility through plugins and a user-friendly interface allows developers to customize their workflow, making Sublime Text a popular choice among programmers for both simple and complex projects.

3. Website Interfaces:

3.1. Homepage Interface:

The homepage of our website is designed to capture the attention of our visitors as soon as they arrive. We chose to highlight captivating photos that reflect our identity. We also have the logo of the APO in the center of the page, featuring an infinite animation.

figure4:homepage interface

3.2.logo interface:.

This logo is in the middle of the homepage. When the user stays on this page, the logo is always moving.

figure5:logo interface

3.3.footer interface:

It is a separate area that provides additional and supplementary information to that found in the main body of the content.

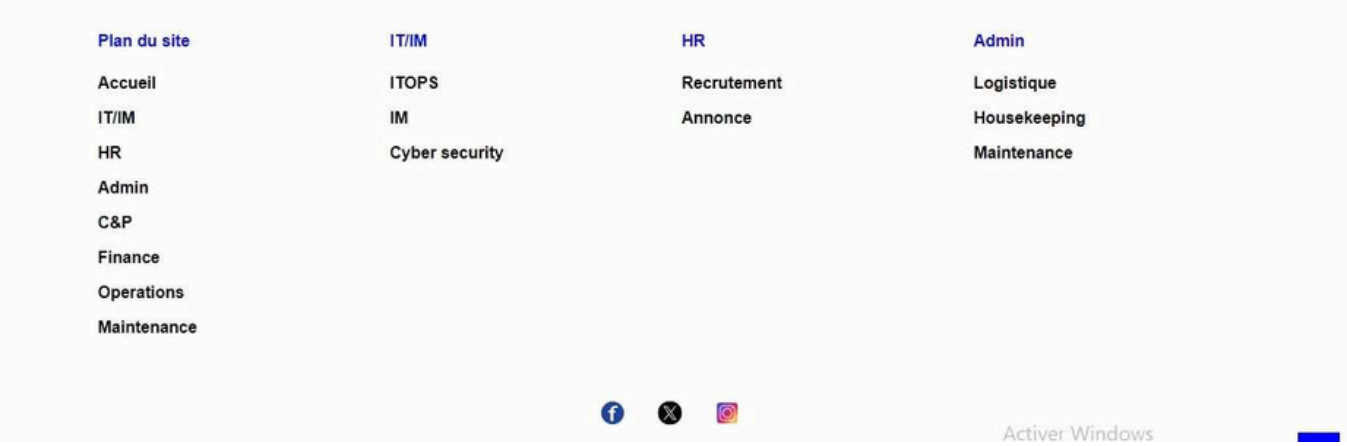

figure6: footer interface

Each button in the 'FOOTER' section allows us to easily access other interfaces or sections of the site. These buttons are strategically placed to provide users with convenient and smooth navigation. By clicking on these buttons, you may be redirected to important pages.

General Conclusion:

This internship provided me with a valuable and enriching experience both professionally and personally.

I was able to apply the theoretical knowledge I gained and develop new practical skills.

I am grateful to my team and supervisors for their support and mentorship throughout this period.
This internship has confirmed my interest in the IT field and made me feel ready to take on new challenges in my future career.
